- Bootstrap
- Tailwindcss
- Vue.js

TOOLS

- VS Code
- Postman
- Github
- Git Bash
- Xampp

LANGUAGE

- English(Upper-Intermediate)
- Japanese(N4)

PROFILE

I am a motivated web developer with over a year of experience specializing in backend development using Laravel. I have hands-on experience building scalable web applications, including Point of Sale(POS) project, Blog project, Social Media App and other mini projects. I am eager to apply my knowledge and continue learning in a professional environment, contributing to backend development projects. I am also very eager to self-study and learn new tech skills.

PROJECT EXPERIENCE

Point of sale(POS) project with Laravel 11 & Blade Template using MVC Pattern

→ [View github repository](#)

- **Authentication** - using **Laravel Breeze**, Login, register and logout process
- **Authorization** - using **Middleware** between superadmin, admin and user
- Database - MySQL using **Laravel Eloquent ORM** for CRUD and data searching
- **Filter and searching** - using Eloquent ORM to filter and retrieve data from database. (Filter: Categories, Price low to high, A-Z, Time| Searching: ItemName)
- Profile - Profile Update, **Change Password**
- Admin - CRUD with product and can view user details and delete Users. can view users feedbacks
- User - can explore the products, search and filter. Users can also do the **Rating, comment** and see the number of **Views** of the products. User can **add** the item to **cart** and adjust the quantity (used **Jquery** and **Ajax** to avoid page loading), Order the items and can **track** the status of each order(pending, accept and rejected)
- **Payment** - Admin has to set the **payment methods** and **bank account number** and user will pay through these information. After **checking** the payment is **valid**, the admin will **accept** the order. Or else the order will be **rejected**.
- **Action logs** - **Tracking** Activities on **viewing** and **commenting** products and **ordering** process.

Blog Project with Laravel 10 Backend API

Tested API with Postman

→ [View github repository](#)

- **Authentication** - Using **Jetstream** to log in, logout and register and give out **token** to interact with the rest of the process and logout.
- Authorization - **Viewing** posts **need** to log in. if user did not log in, Viewing blog posts will be **blocked**.
- Filter and Searching - request through **API with token** and response with validation and **status code** in **json** format.
- Action Logs, view counts and CRUD process including **image** with API.
